

Uday Kiran Byreddy

Bangalore, India

+91-9550790010 — udaykiranbyreddy@gmail.com — LinkedIn — GitHub — Portfolio

PROFESSIONAL SUMMARY

- Full Stack Developer with 2+ years of experience building scalable web and desktop applications using Java, Spring Boot, React, and Tauri.
- Experienced in real-time systems, event-driven architecture, observability, and performance optimization.
- Built production-grade features across healthcare products including frontend architecture, device integrations, and backend services.
- Strong foundation in system design, distributed systems, and end-to-end product ownership.

TECHNICAL SKILLS

Languages: Java, JavaScript, SQL, Go

Frontend: React, HTML, CSS

Backend: Spring Boot, Node.js

Databases: PostgreSQL, MySQL

Tools/Platforms: Docker, Git, NATS JetStream, Grafana, Tauri, Linux (Ubuntu)

Testing: JUnit, Mockito

Familiar: Rust, Angular

PROFESSIONAL EXPERIENCE

SigTuple

Nov 2024 – Present

Full Stack Developer

Bangalore, India

- Developed cross-platform desktop applications using React and Tauri with real-time communication via NATS JetStream, reducing latency by 40%.
- Built a shared frontend package used across AlphaScan, AlphaCyte, and SigVet to standardize reusable UI components and reduce duplicate development effort.
- Led migration of legacy frontend modules to a new architecture/framework, improving maintainability and scalability.
- Developed custom printer integration enabling seamless device discovery, connection, preview, and printing workflows.
- Built Wi-Fi provisioning workflows using Rust + frontend bridge for easier device onboarding.
- Reduced Rust application bundle size by implementing caching and optimization techniques, improving deployment efficiency.
- Implemented UI version control/config management to support safer releases and rollback handling.
- Integrated Grafana monitoring for real-time observability across services.
- Built and optimized backend APIs for order workflows, improving response times for high-volume records through server-side pagination and filtering.
- Managed feature releases, debugging, and production fixes to ensure stable deployments across multiple product environments.

MoutBlue

Aug 2024 – Nov 2024

Full Stack Developer

Bangalore, India

- Built backend APIs using Spring Boot for core business workflows.
- Developed frontend features using React and improved application performance.

Shiash InfoTech

May 2024 – Aug 2024

Full Stack Java Intern

Remote

- Developed Spring Boot APIs with JWT authentication and PostgreSQL; achieved 80% test coverage using JUnit and Mockito.

EDUCATION

Sree Vidyanikethan Engineering College

2020 – 2024

B.Tech in Electronics and Communication Engineering — CGPA: 9.0

PROJECTS

Latency Visualization Dashboard (React, Recharts)

2025

- Built a real-time analytics dashboard for monitoring latency metrics.
- Implemented dynamic filters and time-range selection with interactive charts.
- Displayed min, max, and average metrics for performance insights.

AI Learning Platform

2025

- Built an education platform integrating video-based learning, AI-powered doubt resolution, and quiz generation.
- Designed personalized learning workflows using adaptive assessments and automated quiz recommendations.
- Developed frontend modules and backend APIs for content delivery, user progress tracking, and interactive learning experiences.
